580A Global X Copper Miners ETF

As of 6/30/2026

FUND OBJECTIVE

The Global X Copper Miners ETF seeks to provide investment results that correspond generally to the price and yield performance, before fees and expenses, of the Solactive Global Copper Miners Total Return Index (JPY converted).

KEY FEATURES

Key Characteristics of Copper Miners

In general, copper mining is an industry with a high proportion of fixed costs, including mining facilities and labor expenses, making it particularly susceptible to operating leverage. Therefore, when copper prices rise and revenues increase, profits are expected to grow at an even faster pace.
Against this backdrop, securities related to copper mining companies tend to exhibit amplified price movements relative to changes in copper prices. On the other hand, during periods of declining copper prices, profits and share prices may also experience larger declines, and investors should therefore exercise caution.

The Operating Leverage

Companies with a high proportion of fixed costs, such as capital expenditures and labor costs, tend to incur relatively limited additional costs as production volumes increase. As a result, their profits often grow at a faster rate than sales. This characteristic, whereby profits fluctuate more significantly than sales, is referred to as “operating leverage”.

ETF Efficiency

In a single trade, the Global X Copper Miners ETF delivers efficient access to a basket of companies involved in the theme.

Fund performance assumes that dividends (before taxes) are reinvested in the fund. NAV value is calculated after deducting trust fees. In the graph, the value of (Solactive Global Copper Miners Total Return Index）is modified to match the fund NAV at the time of inception.The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor’s shares, when sold or redeemed, may be worth more or less than their original cost. High short term performance of the fund is unusual and investors should not expect such performance to be repeated.

Investment Risks
The Fund will invest in financial instruments whose prices fluctuate and as a result the NAV per unit of the Fund will also fluctuate. Therefore the invested amount will not be guaranteed and a loss of principal may be caused. All the gains and losses accrued to the trust assets will be attributable to the investors. Investment trusts are not deposits.
Major factors to cause fluctuation of NAV per unit:
Stock Price Volatility (Price Volatility risks / Credit risks), Exchange risks, Country risks, Other risks
The performance of the NAV may not completely match that of the index. The factors to cause fluctuation of NAV per unit are not limited to those mentioned above. Please read “Investment Risks” in the fund’s Prospectus describing in detail.
